LIBRARY MAPATHON · AFTER THE SESSION

On your own: keep mapping

Tasking Manager
tasks.hotosm.org

You can keep mapping with the same account whenever you like. Each step below says what you should see when it worked.

1. Map another task

1. Go to **tasks.hotosm.org** and log in.
2. **Explore projects**. Filter by difficulty and choose a beginner project. If this month's project still has open squares, you can go back to it.
3. Read the instructions, pick an available square, and follow the steps on your cheat sheet.

Expected result: the square you mapped changes color on the project map.

2. Read your feedback

1. On openstreetmap.org, click your username at the top right, then open your messages.
2. Read any comments from validators, and look at the task they mention.

Expected result: you can see whether your task was validated, or what a validator asked you to fix.

3. Find your edits

1. On openstreetmap.org, click your username, then your edits (your changesets).
2. Open one to see what you added and the comment you wrote.

Expected result: your changesets are listed with your comments and the hashtags you added.

4. Try mapping on your phone

1. Install **MapSwipe** from your app store (missingmaps.org/mapswipe).
2. Pick a project and swipe through satellite images, tapping the ones with buildings.

Expected result: the app counts the images you've looked at.

5. Map what you know

1. On openstreetmap.org, zoom to somewhere you know well, such as campus or your street.
2. **Edit**, then add something missing, like a bench, a bike rack or a building entrance. Save with a comment.

Expected result: after a few minutes, your addition appears on the map at openstreetmap.org.
